

## ***Homework Assignment #7***

---

- 1- Write a program that reads every line in a text file, removes the first word from each line, and then writes the resulting lines to a new text file.
- 2- Write a recursive method that will compute the number of odd digits in a number.
- 3- Write a program that will read a text file that contains an unknown number of movie review scores. Read the scores as Double values and put them in an instance of ArrayList. Compute the average score.

**Submit your source codes (.java files) for all of the exercises.**
